BCS 100: Introduction to the Circumpolar North University of the Arctic

MODULE 8: Stewardship of Resources & Sustainable Development

Developed by
Bjørn Sagdahl
Bodø University College, Bodø Norway

Overview

This module will give you a brief overview of renewable and non-renewable resources, resource exploitation and stewardship challenges. It is important to focus on analytical concepts and approaches to problem solving because it will enable you to gain an essential understanding of how to manage resource extraction and resource use and the resulting environmental effects. We will also use an interdisciplinary approach in presenting the concepts in this module. That is to say, we use many different disciplines to explain resource extraction and management.

The module begins by briefly explaining the distinction between renewable and non-renewable natural resources in the context of common property, and the differences in how resources are managed. The module then examines three different resource management models, international cooperation, and constraints to implementing international policy at the local level.

Learning Objectives & Outcomes

Upon completion of this module you should be able to:

1. Understand common pool resources and the logic of "the tragedy of the commons."
2. Explore the relationships between different economic adaptation and management needs.
3. Describe the differences among the three main resource management models: state authority, market driven and resource co-management.
4. Summarize the details for basic international cooperation for sustainable development.
5. Evaluate the constraints to implementing the precautionary principle.

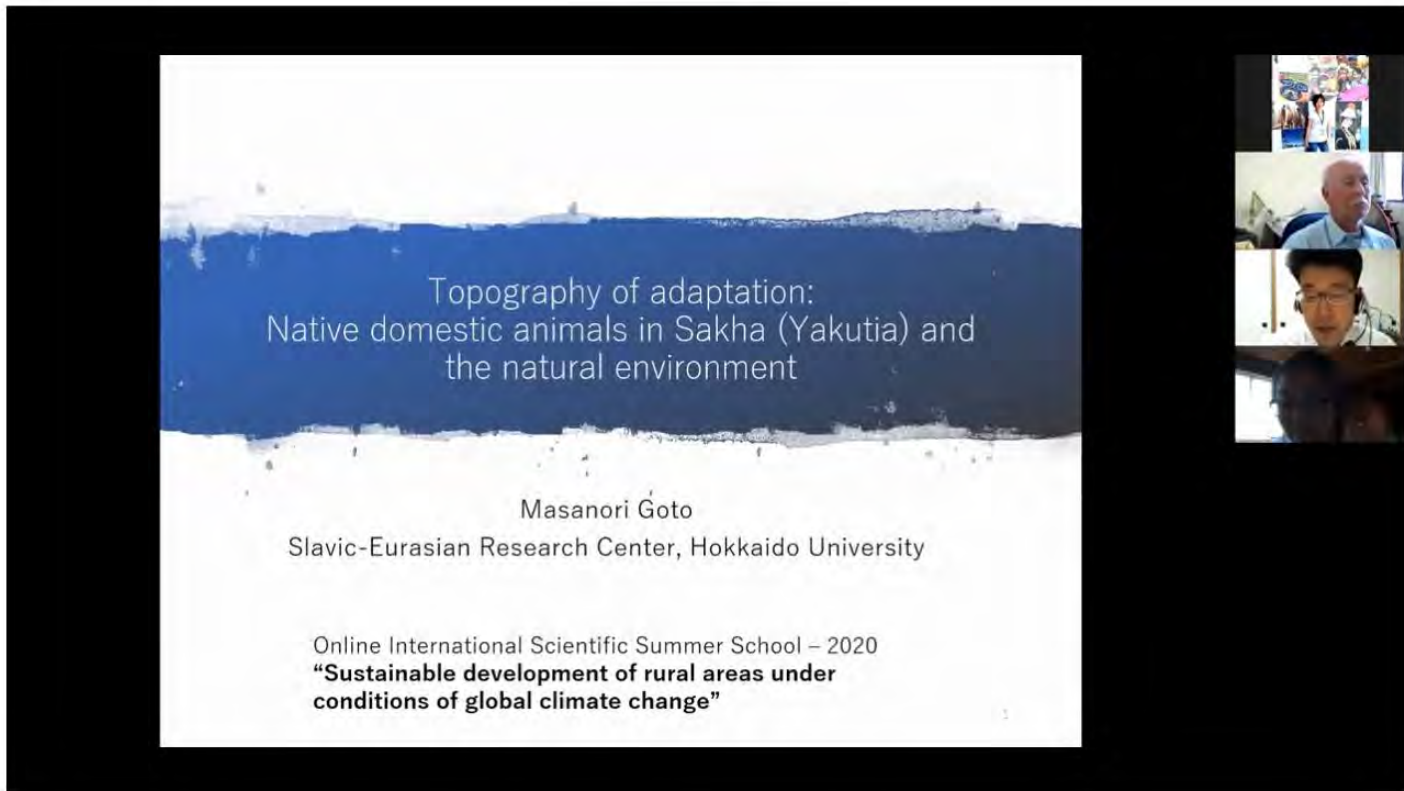

Required Readings

Also we have added lecture materials in pdf format
(University of Arctic resource)

Lecture

The screenshot shows a Zoom meeting interface. The main content is a slide with a blue and white background. The slide text reads: "Topography of adaptation: Native domestic animals in Sakha (Yakutia) and the natural environment", "Masanori Goto", "Slavic-Eurasian Research Center, Hokkaido University", and "Online International Scientific Summer School – 2020 'Sustainable development of rural areas under conditions of global climate change'". On the right side, there is a vertical stack of video thumbnails. The top thumbnail shows a group of people, the middle one shows Professor Masanori Goto, and the bottom one shows another participant.

Our gratitude to international partners

ASAU appreciate and express gratitude to professor Masanori Goto and Hokkaido University!

Our university is ready to cooperate and share our knowledge and experience in online education.

This situation with pandemic has changed our world so it will never be the same, but together we will manage to overcome all difficulties as good friends and partners!

FEDERAL STATE BUDGET EDUCATIONAL INSTITUTION OF HIGHER EDUCATION
ARCTIC STATE AGROTECHNOLOGICAL UNIVERSITY

LETTER OF GRATITUDE AND APPRECIATION

Dear MOSANORI GOTO

Arctic State Agrotechnological University expresses gratitude to you for fruitful cooperation. Thank you for time, talent, and experience that you have given to the Online International Scientific Summer School - 2020 «Sustainable development of rural areas under conditions of global climate change» and also for your active participation on ASAU Summer school.

Your ideas, contribution and enthusiasm were most helpful and have assisted us in making valuable improvements to our project. We wish you and your team successful development, achievements and stronger performance in professional activity!

Rector

Sleptsov I.I.

Yakutsk, 2020

Thank you
